

Description

The Si510/Si511 XO utilizes Silicon Labs' advanced DSPLL technology to provide any frequency from 100 kHz to 250 MHz. Unlike a traditional XO, where a different crystal is required for each output frequency, the Si510/Si511 uses one fixed-frequency crystal and Silicon Labs' proprietary DSPLL synthesizer to generate any frequency across this range. This IC-based approach allows the crystal resonator to provide enhanced reliability, improved mechanical robustness, and excellent stability. In addition, this solution provides superior supply noise rejection, simplifying low-jitter clock generation in noisy environments. Crystal ESR and DLD are individually production-tested to guarantee performance and enhance reliability. The Si510/Si511 is factory-configurable for a wide variety of user specifications, including frequency, supply voltage, output format, output enable polarity, and stability. Specific configurations are factory-programmed at time of shipment, eliminating long lead times and non-recurring engineering charges associated with custom frequency oscillators.

Features

- Supports any frequency from 100 kHz to 250 MHz
- Low jitter: 0.8 ps RMS (12 kHz–20 MHz)
- Frequency stability: $\pm 20/\pm 30/\pm 50$ ppm including 10-year aging
- 2x tighter stability than SAW oscillators
- Programmable output enable pin location and polarity settings
- 1.8 V, 2.5 V, 3.3 V V_{DD} supply operation
- Differential (LVPECL, LVDS, HCSL) or CMOS output options
- Standard frequencies in stock and available for rapid delivery
- Custom frequencies available with < 2 week lead times

Applications

- SONET/SDH/OTN
- Gigabit Ethernet
- Fibre Channel/SAS/SATA
- 3G-SDI/HD-SDI/SDI
- FPGA/ASIC/SoC clocking
