- DESCRIPTION AND APPLICATIONS

The FP100 is an Aluminum Gallium Arsenide / Indium Gallium Arsenide (AlGaAs/InGaAs) Pseudomorphic High Electron Mobility Transistor (PHEMT), utilizing an Electron-Beam direct-write 0.25 μ m by 100 μ m Schottky barrier gate. The recessed “mushroom” gate structure minimizes parasitic gate-source and gate resistances. The FP100 features Si₃N₄ passivation.

Typical applications include general purpose, low noise and broadband amplifiers in the 2-20 GHz range. The device is well-suited for telecommunication applications.
